

Theory of Change

WHY?	WHO?	HOW	WHAT?
• Why is this research needed? • What is the underlying problem or challenge? • What change is needed in the world, and why now? • How does your research respond to this need?	• Who are the primary beneficiaries of the research? • Who are the stakeholders, users, or collaborators? • Who needs to be engaged for the change to happen?	• What research design and methods will you use, and why are they appropriate? • What are the key stages or activities, and how are they sequenced? • How will you ensure rigour, ethics, and meaningful stakeholder involvement?	• What does success look like at the highest level? • What are the outcomes or impacts you hope your work contributes to? • Are these realistic and measurable over time?
Risks and Barriers:		Opportunities:
